# Issue Animals Hierarchy in the Blogosphere

Research Question_ For the issue of climate change, how prominent is each animal (in text and image)? Are there significant differences per 'sphere' (web, news, blogosphere) in the frequency with which each animal is referenced?

Findings_ In the blogosphere, for a text query, the polar bear is the animal most associated with climate change, followed by the cow.

sea turtle

eagle COW whale crane

polar bear

dolphin frog

tiger elephant panda

walrus

penguin

orangutan
